(U. Grenoble Alpes)

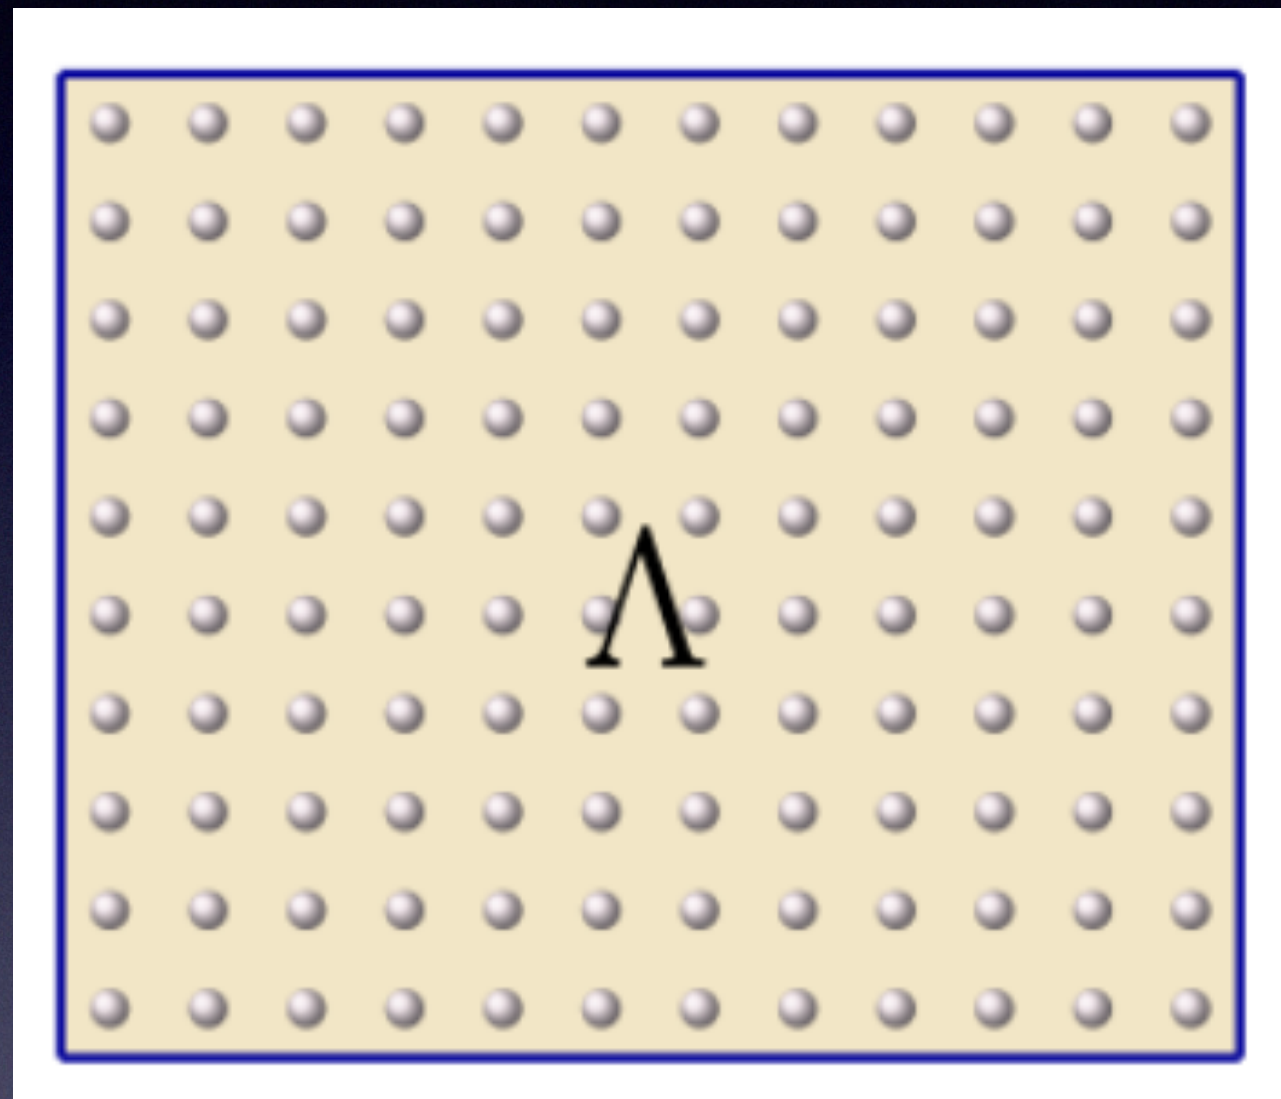

Antonio Pérez-Hernández  
(UNED, Spain)

# INTRODUCTION TO THE SETTING

Study of locality, stability and correlations on quantum Gibbs states

- Lattice  $\Lambda \subset \mathbb{Z}^D$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ 
  - Short-range (exponentially-decaying interactions)
  - Finite-range (k-local interactions)
- Gibbs state (at inverse temperature  $\beta > 0$ )  
$$\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$$

## Properties:

- Locality (from systems to states)
- Stability (against perturbations)
- Correlations (decay between spatially separated regions)

# SHORT-RANGE HAMILTONIANS

- Lattice  $\Lambda \subset \mathbb{Z}^D$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$
- Short-range (exponentially-decaying interactions)
 
$$\|H_\Lambda\|_{\lambda, \mu} := \sup_{x \in V} \sum_{X \ni x} \|H_X\| e^{\lambda|X| + \mu \text{diam}(X)} < \infty$$
- Finite-range (k-local interactions)
 
$$H_X = 0 \text{ for } \text{diam}(X) > k \text{ and } \|H_X\| < J \quad \forall X \subset \Lambda$$

- Gibbs state (at inverse temperature  $\beta > 0$ )

$$\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$$

# PROPERTIES OF SHORT-RANGE HAMILTONIANS

Main goal of this talk:

“Unification of several properties of locality and measures of correlations on Gibbs states”

Summary of main results:

- From decay of correlations to locality and stability of the Gibbs state

- Strong decay of correlations for Gibbs states in any dimension

Effective Hamiltonian

→ Equivalence of several measures of correlations (covariance, mutual information, mixing condition)

FROM DECAY OF CORRELATIONS TO LOCALITY  
AND STABILITY OF THE GIBBS STATE  
(C., MOSCOLARI, TEUFEL, WESSEL, '23)

# DECAY OF CORRELATIONS (COVARIANCE)

- Lattice  $\Lambda \subset \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$
- Gibbs state (at inverse temperature  $\beta > 0$ )  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$
- Family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \subset \mathbb{Z}^D}$

## Covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) = \sup_{\|O_A\|=\|O_C\|=1} |\text{Tr}[\rho^\Lambda O_A O_C] - \text{Tr}[\rho^\Lambda O_A] \text{Tr}[\rho^\Lambda O_C]|$$

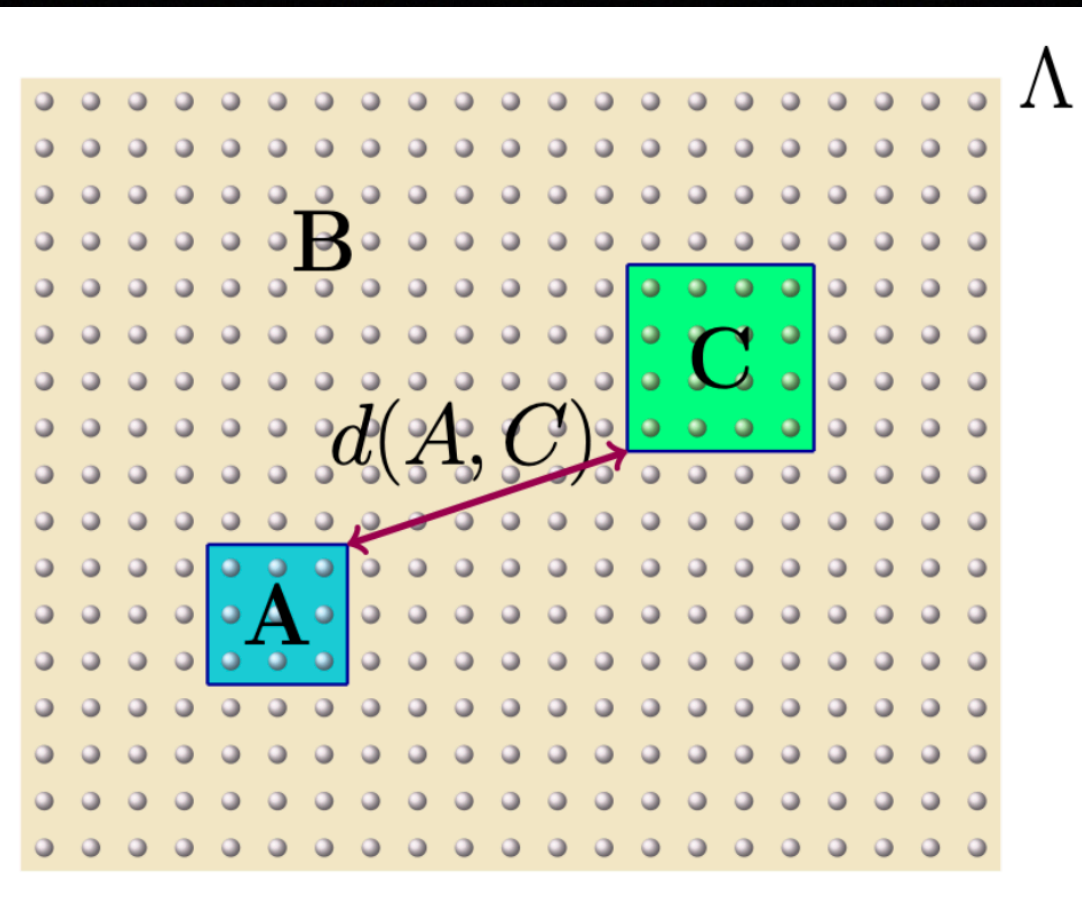

Exponential decay with  $d(A, C)$ ?

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

(for  $K_{\text{Cov}} > 0$ ,  $\alpha_{\text{Cov}} > 0$  and  $f_{\text{Cov}}(A, C)$  depending on the size of  $A$  and  $C$ , but uniform in  $\Lambda$ )

# DECAY OF CORRELATIONS (COVARIANCE)

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$
- Gibbs state  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$

## Exponential decay covariance?

$$\text{Cov}_{\rho^\Lambda}(A, C) = \sup_{\|O_A\|=\|O_C\|=1} |\text{Tr}[\rho^\Lambda O_A O_C] - \text{Tr}[\rho^\Lambda O_A] \text{Tr}[\rho^\Lambda O_C]| \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

## 1D, translation-invariant Hamiltonian

	Infinite chain	Finite chain
Finite range	$\beta > 0$ [Araki, '69]	$\beta > 0$ [Bluhm, C. Pérez-Hernández, '22] (QIP2022)
Short range	$\beta < \beta_1$ [Pérez-García, Pérez-Hernández, '23]	$\beta < \beta_1$ [C., Moscolari, Teufel, Wessel, '23]

$\beta_1 \rightarrow 0$  for finite range,  $f_{\text{Cov}}(A, C) = 1$

## High D, high-enough temperature

$$\beta < \beta_*$$

Finite range	[Kliesch et al., '14] $f_{\text{Cov}}(A, C) = \mathcal{O}( \partial A ,  \partial C )$
Short range	[Fröhlich-Ueltschi, '15] $f_{\text{Cov}}(A, C) = \mathcal{O}( A  C )$

# LOCAL PERTURBATIONS PERTURB LOCALLY (LPPL)

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$
- Gibbs state  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$
- Perturbation  $V_C$ , observable  $O_A$
- Perturbed Gibbs state  $\tilde{\rho}^\Lambda := \frac{e^{-\beta(H_\Lambda + V_C)}}{\text{Tr}[e^{-\beta(H_\Lambda + V_C)}]}$

## Local Perturbations Perturb Locally (LPPL)

$$|\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A)| \leq K_{LPPL} \|O_A\| f_{LPPL}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)}$$

(for  $K_{LPPL} > 0$ ,  $\alpha_{LPPL} > 0$  and  $f_{LPPL}(A, C)$  depending on the size of  $A$  and  $C$ , but uniform in  $\Lambda$ )

LPPL is frequently used for locality of ground states [Bachmann et al., '11] [de Roeck, Schütz, '15] [Henheik et al., '22]

# LOCAL INDISTINGUISHABILITY

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$
- Gibbs state  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$
- Gibbs state (of truncated Hamiltonian)  $\rho^{AB} := \frac{e^{-\beta H_{AB}}}{\text{Tr}[e^{-\beta H_{AB}}]}$

## Local indistinguishability

$$|\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A)| \leq K_{LI} \|O_A\| f_{LI}(A, C) e^{-\alpha_{LI} d(A, C)}$$

(for  $K_{LI} > 0$ ,  $\alpha_{LI} > 0$  and  $f_{LI}(A, C)$  depending on the size of A and C, but uniform in  $\Lambda$ )

Previously used in [Brandao-Kastoryano, '19] for efficient preparation of Gibbs states  
QIP2017

Also used in [Bluhm, C., Pérez-Hernández, '22] [Onorati et al., '23]  
QIP2022 QIP2024

# CONNECTIONS IN HIGH DIMENSION

In [C., Moscolari, Teufel, Wessel, '23], for short-range interactions:

## Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

## Local indistinguishability

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A)| \\ & \leq K_{LI} \|O_A\| f_{LI}(A, C) e^{-\alpha_{LI} d(A, C)} \end{aligned}$$

## Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A)| \\ & \leq K_{LPPL} \|O_A\| f_{LPPL}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)} \end{aligned}$$

Previous result: In [Brandao-Kastoryano, '19] exponential decay of covariance implies local indistinguishability for finite-range interactions

QIP2017

# CONNECTIONS IN HIGH DIMENSION

High dimension

$$\beta < \beta_*$$

[Kliesch et al., '14] finite-range

[Fröhlich-Ueltschi, '15] short-range

In [C., Moscolari, Teufel, Wessel, '23], for short-range interactions:

Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

Local indistinguishability

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A)| \\ & \leq K_{LI} \|O_A\| f_{LI}(A, C) e^{-\alpha_{LI} d(A, C)} \end{aligned}$$

Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A)| \\ & \leq K_{LPPL} \|O_A\| f_{LPPL}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)} \end{aligned}$$

# CONNECTIONS IN 1D, TRANSLATION-INVARIANT

1D, translation-invariant

$$\beta < \beta_1$$

$\beta_1 \rightarrow 0$  for finite range,

[Araki, '69] finite-range

[Pérez-García, Pérez-Hernández '23] short-range

Exponential decay covariance (infinite chain)

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} e^{-\alpha_{\text{Cov}} d(A, C)}$$

[Bluhm, C., Pérez-Hernández, '22] finite-range

[C., Moscolari, Teufel, Wessel, '23] short-range

Exponential decay covariance (finite chain)

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} e^{-\alpha_{\text{Cov}} d(A, C)}$$

[C., Moscolari, Teufel, Wessel, '23]

Local indistinguishability

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A)| \\ & \leq K_{LI} \|O_A\| e^{-\alpha_{LI} d(A, C)} \end{aligned}$$

Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A)| \\ & \leq K_{LPPL} \|O_A\| e^{3\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)} \end{aligned}$$

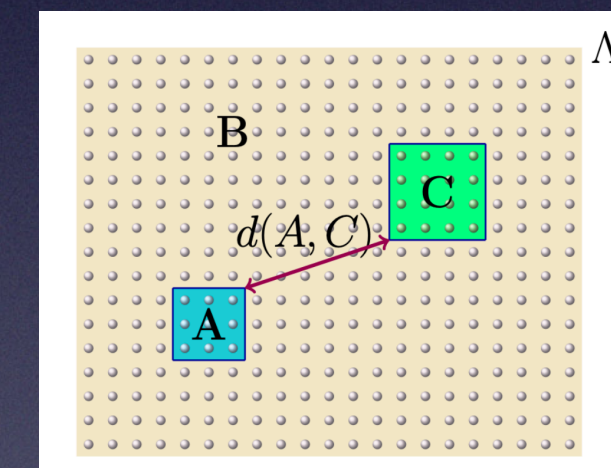

# PROOF IN HIGH DIMENSION

## Main ingredients:

- Quantum Belief Propagation (QBP) [Hastings, '07], [Kim, '12] and many more
- Lieb–Robinson bounds [Lieb–Robinson, '72]

### Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

### Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned} & \left| \text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A) \right| \\ & \leq K_{\text{LPPL}} \|O_A\| f_{\text{LPPL}}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{\text{LPPL}} d(A, C)} \end{aligned}$$

# PROOF IN HIGH DIMENSION

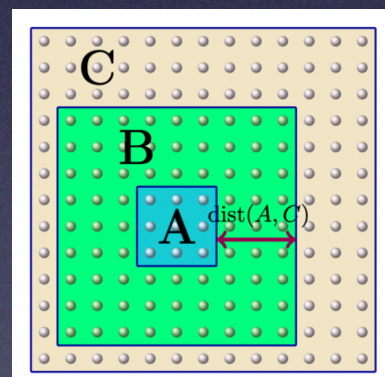

## Main ingredients:

- Quantum Belief Propagation (QBP) [Hastings, '07], [Kim, '12] and many more
- Lieb-Robinson bounds [Lieb-Robinson, '72]
- Site-by-site removal [Brandao-Kastoryano, '19]

QIP2017

### Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

### Local indistinguishability

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A)| \\ & \leq K_{LI} \|O_A\| f_{LI}(A, C) e^{-\alpha_{LI} d(A, C)} \end{aligned}$$

### Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned} & |\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A)| \\ & \leq K_{LPPL} \|O_A\| f_{LPPL}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)} \end{aligned}$$

# PROOF IN HIGH DIMENSION

## Main ingredients:

# QUANTUM BELIEF PROPAGATION

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , perturbation  $V_C$

## Quantum Belief Propagation

$$e^{-\beta(H_\Lambda + V_C)} = \eta(V_C) e^{-\beta H_\Lambda} \eta(V_C)^*$$

$$\text{with } \eta(V) = \sum_{m=0}^{\infty} \left(\frac{-\beta}{2}\right)^m \int_0^1 ds_1 \int_0^{s_1} ds_2 \dots \int_0^{s_{m-1}} ds_m \mathcal{U}^{s_m}(V) \dots \mathcal{U}^{s_1}(V) \quad \text{for } \mathcal{U}_H^s(V) := \int_{\mathbb{R}} dt f_\beta(t) e^{-iH(s)t} V e^{iH(s)t}$$

# QUANTUM BELIEF PROPAGATION

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , perturbation  $V_C$

## Quantum Belief Propagation

$$e^{-\beta(H_\Lambda + V_C)} = \eta(V_C) e^{-\beta H_\Lambda} \eta(V_C)^*$$

$$\text{with } \eta(V) = \sum_{m=0}^{\infty} \left(\frac{-\beta}{2}\right)^m \int_0^1 ds_1 \int_0^{s_1} ds_2 \dots \int_0^{s_{m-1}} ds_m \mathcal{U}^{s_m}(V) \dots \mathcal{U}^{s_1}(V) \text{ for } \mathcal{U}_H^s(V) := \int_{\mathbb{R}} dt f_\beta(t) e^{-iH(s)t} V e^{iH(s)t}$$

## Quantum Belief Propagation for short-range interactions [C., Moscolari, Teufel, Wessel, '23]

Path of Hamiltonians  $H_\Lambda(s) := H_\Lambda + sV_C$

- For  $H_\Lambda(s)$  we have  $e^{-\beta H_\Lambda(s)} = \eta(s) e^{-\beta H_\Lambda} \eta(s)^*$ ,  $\|\eta(s)\| \leq e^{\frac{\beta}{2}s\|V_C\|}$

- For the Gibbs states  $\rho^\Lambda(s) := \frac{e^{-\beta H_\Lambda(s)}}{\text{Tr}[e^{-\beta H_\Lambda(s)}]}$  we have  $\rho_\beta^\Lambda(s) = \tilde{\eta}(s) \rho_\beta^\Lambda(0) \tilde{\eta}(s)^*$ ,  $\|\tilde{\eta}(s)\| \leq e^{\beta s\|V_C\|}$

$$\text{with } \|\rho_\beta^\Lambda(s) - \rho_\beta^\Lambda(0)\|_1 \leq e^{2\beta s\|V_C\|} - 1$$

- Moreover  $\|\tilde{\eta}(s) - \tilde{\eta}_\ell(s)\| \leq \kappa \beta s\|V_C\| e^{\beta s\|V_C\|} e^{-\gamma \ell}$

# SITE REMOVAL

Local indistinguishability

$$\begin{aligned}
 & \left| \text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A) \right| \\
 & \leq K_{LI} \|O_A\| f_{LI}(A, C) e^{-\alpha_{LI} d(A, C)}
 \end{aligned}$$

[Brandao-Kastoryano, '19]  
QIP2017

Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned}
 & \left| \text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A) \right| \\
 & \leq K_{LPPL} \|O_A\| f_{LPPL}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)}
 \end{aligned}$$

- Idea: Remove site by site in the boundary (from the interactions in the Hamiltonian)
- Use QBP and exp. decay of covariance to show that the change at each step is small

This requires uniform exponential decay of covariance!

[Kuwahara, '24] QIP2024      Otherwise, the scaling is not good enough

Similar idea in [Onorati et al., '23] QIP2024

**STRONG DECAY OF CORRELATIONS FOR  
GIBBS STATES IN ANY DIMENSION  
(BLUHM, C., PÉREZ-HERNÁNDEZ, '24)**

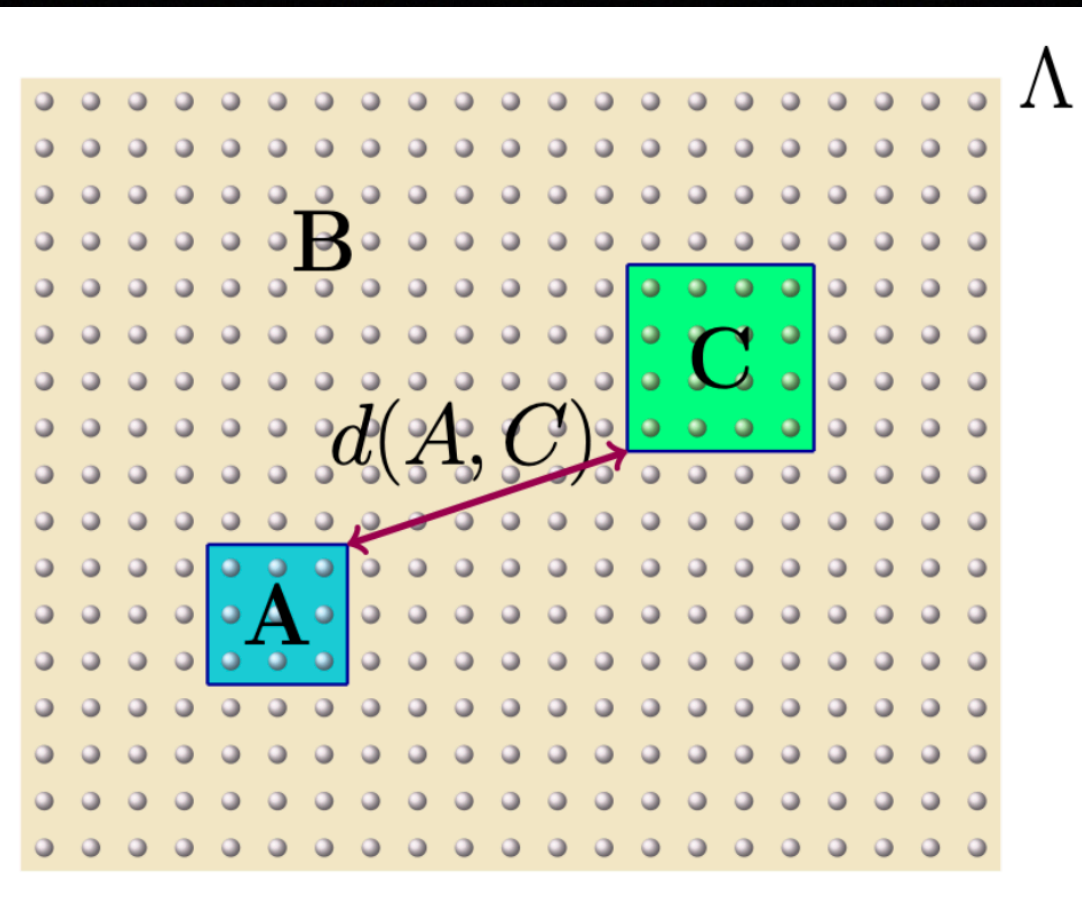

Effective Hamiltonian

**Equivalence of several measures of correlations  
(covariance, mutual information, mixing condition)**

# DECAY OF CORRELATIONS (COVARIANCE)

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$
- Gibbs state  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$

## Exponential decay covariance?

$$\text{Cov}_{\rho^\Lambda}(A, C) = \sup_{\|O_A\|=\|O_C\|=1} |\text{Tr}[\rho^\Lambda O_A O_C] - \text{Tr}[\rho^\Lambda O_A] \text{Tr}[\rho^\Lambda O_C]| \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

## 1D, translation-invariant Hamiltonian

	Infinite chain	Finite chain
Finite range	$\beta > 0$ [Araki, '69]	$\beta > 0$ [Bluhm, C. Pérez-Hernández, '22] (QIP2022)
Short range	$\beta < \beta_1$ [Pérez-García, Pérez-Hernández, '23]	$\beta < \beta_1$ [C., Moscolari, Teufel, Wessel, '23]

$\beta_1 \rightarrow 0$  for finite range,  $f_{\text{Cov}}(A, C) = 1$

## High D, high-enough temperature

$$\beta < \beta_*$$

Finite range	[Kliesch et al., '14] $f_{\text{Cov}}(A, C) = \mathcal{O}( \partial A ,  \partial C )$
Short range	[Fröhlich-Ueltschi, '15] $f_{\text{Cov}}(A, C) = \mathcal{O}( A  C )$

# DECAY OF MUTUAL INFORMATION

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$
- Gibbs state (at inverse temperature  $\beta > 0$ )  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$
- Family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$

Mutual information  $\rho^\Lambda \equiv \rho$

$$I_\rho(A : C) = D(\rho_{AC} \| \rho_A \otimes \rho_C) = \text{Tr}[\rho_{AC}(\log \rho_{AC} - \log \rho_A \otimes \rho_C)]$$

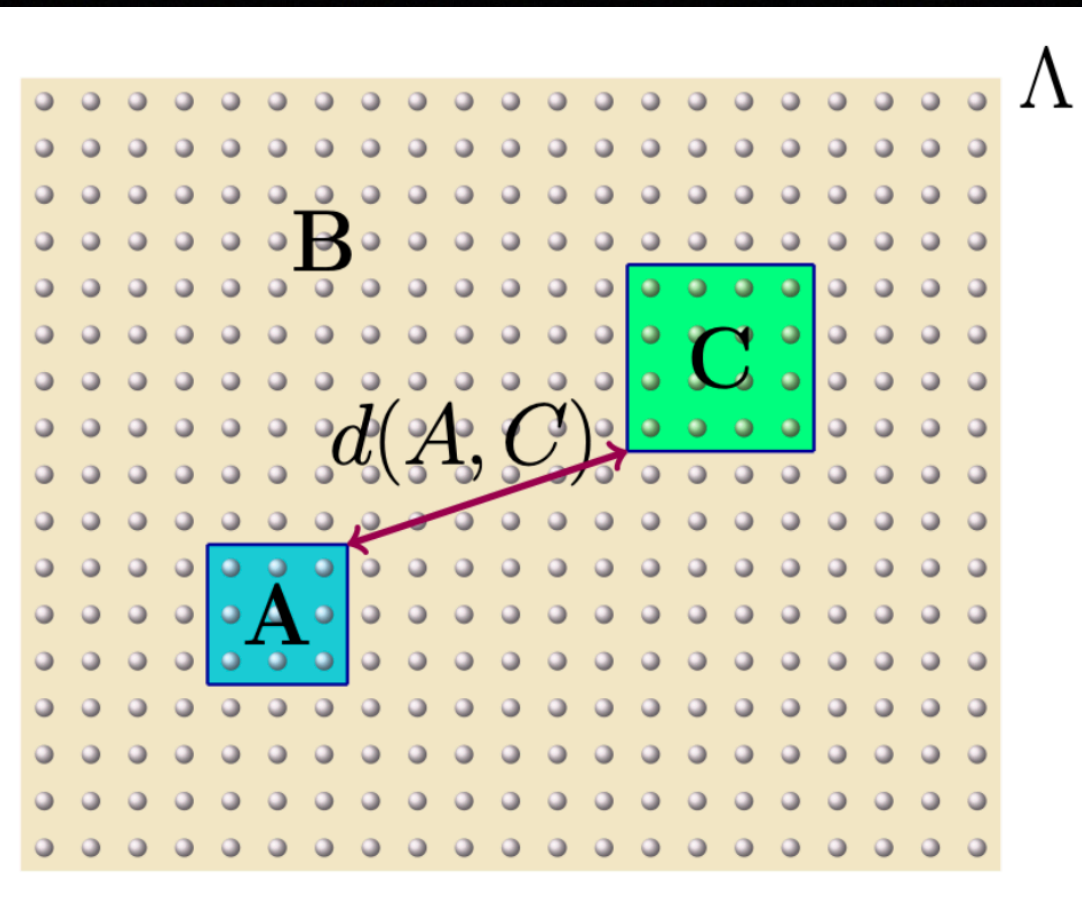

**Exponential decay with  $d(A, C)$ ?**

$$I_{\rho^\Lambda}(A : C) \leq K_{MI} f_{MI}(A, C) e^{-\alpha_{MI} d(A, C)}$$

(for  $K_{MI} > 0$ ,  $\alpha_{MI} > 0$  and  $f_{MI}(A, C)$  depending on the size of  $A$  and  $C$ , but uniform in  $\Lambda$ )

# DECAY OF MUTUAL INFORMATION

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$ , family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$
- Gibbs state  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$

## Exponential decay mutual information?

$$I_\rho(A : C) = \text{Tr}[\rho_{AC}(\log \rho_{AC} - \log \rho_A \otimes \rho_C)] \leq K_{MI} f_{MI}(A, C) e^{-\alpha_{MI} d(A, C)}$$

### 1D, translation-invariant Hamiltonian

**Finite chain**

$\beta > 0$  [Bluhm, C. Pérez-Hernández, '22] (QIP2022)

Finite range	
Short range	?

### High D, high-enough temperature

$$\beta < \beta_*$$

Finite range	[Kuwahara et al., '20] ?
Short range	?

# MIXING CONDITION

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$
- Gibbs state (at inverse temperature  $\beta > 0$ )  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$
- Family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$

## Mixing condition $\rho^\Lambda \equiv \rho$

$$\|\rho_{AC} \rho_A^{-1} \otimes \rho_C^{-1} - \mathbf{1}\| \leq K_{MC} f_{MC}(A, C) e^{-\alpha_{MC} d(A, C)}$$

(for  $K_{MC} > 0$ ,  $\alpha_{MC} > 0$  and  $f_{MC}(A, C)$  depending on the size of A and C, but uniform in  $\Lambda$ )

Instrumental in the proof of Modified Logarithmic Sobolev Inequalities  
(and thus rapid mixing of Lindbladians)

[Kochanowski, Alhambra  
C., Rouzé, '24]  
(QIP2024)

# MIXING CONDITION

- Lattice  $\Lambda \subset \mathbb{Z}^D$ ,  $\Lambda = ABC$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$
- Gibbs state (at inverse temperature  $\beta > 0$ )  $\rho^\Lambda := \frac{e^{-\beta H_\Lambda}}{\text{Tr}[e^{-\beta H_\Lambda}]}$
- Family of Hamiltonians  $(H_\Lambda)_{\Lambda \subset \mathbb{Z}^D}$

Mixing condition  $\rho^\Lambda \equiv \rho$

$$\|\rho_{AC} \rho_A^{-1} \otimes \rho_C^{-1} - \mathbf{1}\| \leq K_{MC} f_{MC}(A, C) e^{-\alpha_{MC} d(A, C)}$$

(for  $K_{MC} > 0$ ,  $\alpha_{MC} > 0$  and  $f_{MC}(A, C)$  depending on the size of  $A$  and  $C$ , but uniform in  $\Lambda$ )

Holds for 1D translation-invariant Hamiltonians,  
at any inverse temperature

Assuming Effective Hamiltonian

Mixing condition

$$\|\rho_{AC} \rho_A^{-1} \otimes \rho_C^{-1} - \mathbf{1}\| \leq K_{MC} f_{MC}(A, C) e^{-\alpha_{MC} d(A, C)}$$

Exp. decay mutual information

$$I_\rho(A : C) \leq K_{MI} f_{MI}(A, C) e^{-\alpha_{MI} d(A, C)}$$

# REQUIREMENT PROOF: EFFECTIVE HAMILTONIAN

- Lattice  $\Lambda \subset \mathbb{Z}^D$
- Hamiltonian  $H_\Lambda = \sum_{X \subset \Lambda} H_X$

## Effective Hamiltonian

$$\tilde{H}_\Lambda^{L,\beta} := -\frac{1}{\beta} \log \mathbb{E}_L[e^{-\beta H_\Lambda}]$$

Effective Hamiltonian [Kuwahara et al. '20] [C., Bluhm, Pérez-Hernández '24] (short-range, commuting)

$$\tilde{H}_\Lambda^{L,\beta} := -\frac{1}{\beta} \log (\text{tr}_{L^c}[e^{-\beta H_\Lambda}] \otimes \mathbf{1}_{L^c}) + \frac{1}{\beta} \log[Z_{L^c}] \mathbf{1}$$

# SUMMARY RESULTS

We have shown: Several properties of locality and decay of correlations on Gibbs states are equivalent!

## Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

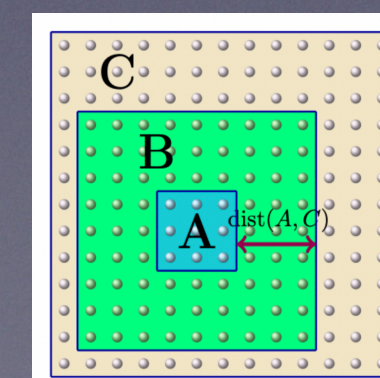

[C., Moscolari, Teufel, Wessel, '23]

## Local Perturbations Perturb Locally (LPPL)

$$\begin{aligned} & \left| \text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A) \right| \\ & \leq K_{\text{LPPL}} \|O_A\| f_{\text{LPPL}}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{\text{LPPL}} d(A, C)} \end{aligned}$$

## Local indistinguishability

$$\begin{aligned} & \left| \text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A) \right| \\ & \leq K_{\text{LI}} \|O_A\| f_{\text{LI}}(A, C) e^{-\alpha_{\text{LI}} d(A, C)} \end{aligned}$$

# SUMMARY RESULTS

We have shown: Several properties of locality and decay of correlations on Gibbs states are equivalent!

## Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

## Exp. decay mutual information

$$I_\rho(A : C) \leq K_{\text{MI}} f_{\text{MI}}(A, C) e^{-\alpha_{\text{MI}} d(A, C)}$$

# SUMMARY RESULTS

1D, translation-invariant

$$\beta < \beta_1$$

High dimension

$$\beta < \beta_*$$

[Araki, '69] finite-range  
[Pérez-García, Pérez-Hernández '23] short-range

[Kliesch et al., '14] finite-range  
[Fröhlich-Ueltschi, '15] short-range

Exponential decay covariance

$$\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{\text{Cov}} f_{\text{Cov}}(A, C) e^{-\alpha_{\text{Cov}} d(A, C)}$$

[C., Moscolari,  
Teufel, Wessel, '23]

Exp. decay mutual information

$$I_\rho(A : C) \leq K_{\text{MI}} f_{\text{MI}}(A, C) e^{-\alpha_{\text{MI}} d(A, C)}$$

[Bluhm, C.  
Pérez-Hernández, '24]

# OPEN PROBLEMS

- Existence of the effective Hamiltonian?
- Long-range interactions?
- More applications?
- Infinite dimensions? In particular, for the Quantum Belief Propagation
- Extend results to 0 temperature (ground states)?

And many more!

**Exponential decay covariance**  
 $\text{Cov}_{\rho^\Lambda}(A, C) \leq K_{Cov} f_{Cov}(A, C) e^{-\alpha_{Cov} d(A, C)}$

**Exp. decay mutual information**  
 $I_\rho(A : C) \leq K_{MI} f_{MI}(A, C) e^{-\alpha_{MI} d(A, C)}$

**Local Perturbations Perturb Locally (LPPL)**  
 $|\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{ABC}(\tilde{\rho}^\Lambda O_A)|$   
 $\leq K_{LPPL} \|O_A\| f_{LPPL}(A, C) e^{c\beta \|V_C\|} e^{-\alpha_{LPPL} d(A, C)}$

**Mixing condition**  
 $\|\rho_{AC} \rho_A^{-1} \otimes \rho_C^{-1} - \mathbf{1}\| \leq K_{MC} f_{MC}(A, C) e^{-\alpha_{MC} d(A, C)}$

**Local indistinguishability**  
 $|\text{Tr}_{ABC}(\rho^\Lambda O_A) - \text{Tr}_{AB}(\rho^{AB} O_A)|$   
 $\leq K_{LI} \|O_A\| f_{LI}(A, C) e^{-\alpha_{LI} d(A, C)}$

Thanks for your attention!
